Ex.no:2 **Setting up a zoho creator account and exploring the platform architecture and interface**

Application Dashboard

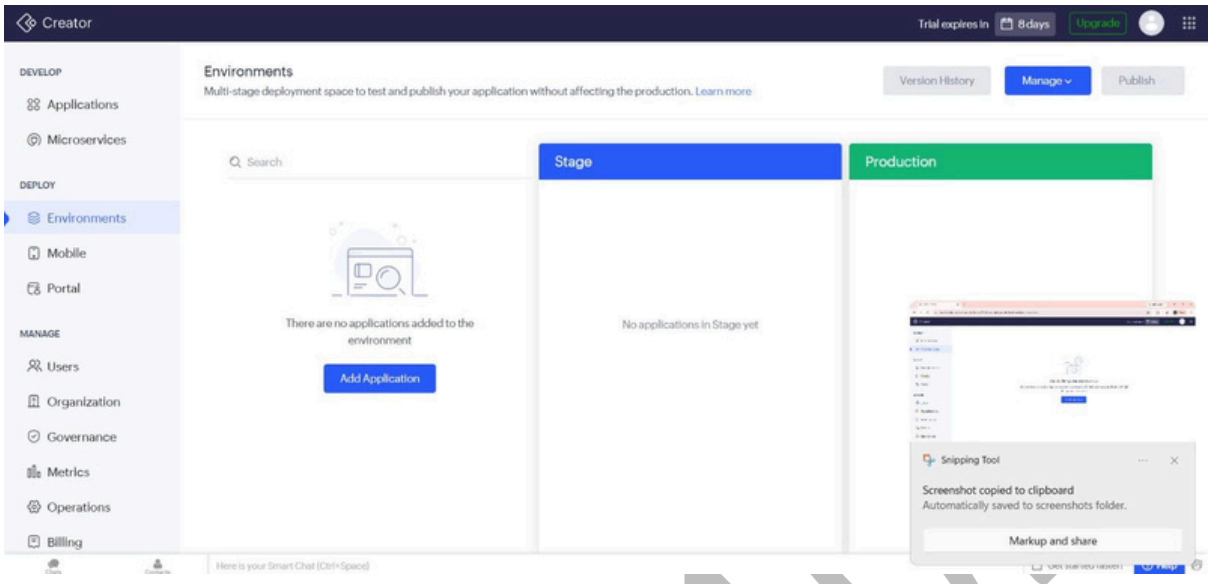

The Zoho Creator Applications Dashboard displays all the applications created by the user in one place. It provides quick access to open, edit, and manage each application. Users can also create new applications using the **Create Application** button. The dashboard offers an organized overview of available projects and their status.

Microservices Page

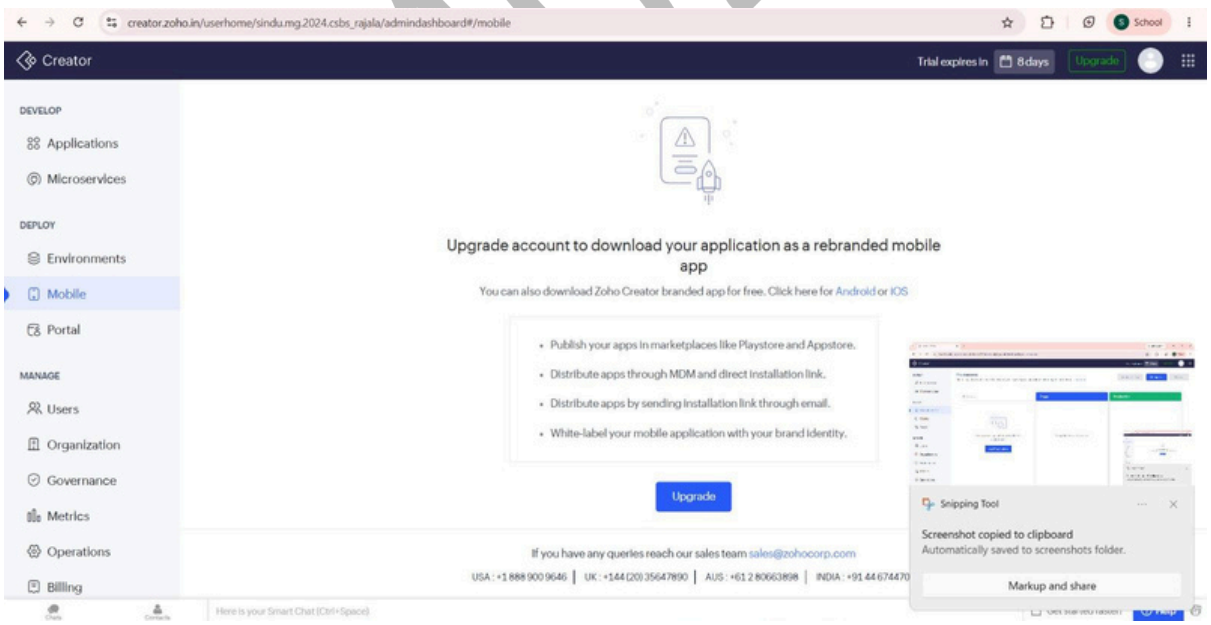

The Microservices page allows users to build modular services that integrate with third-party applications and AI features. Since no microservices have been created, the page displays a **Create New** button to start building one. This section helps developers extend application functionality using independent services. It supports scalable and flexible application development.

Environments Page

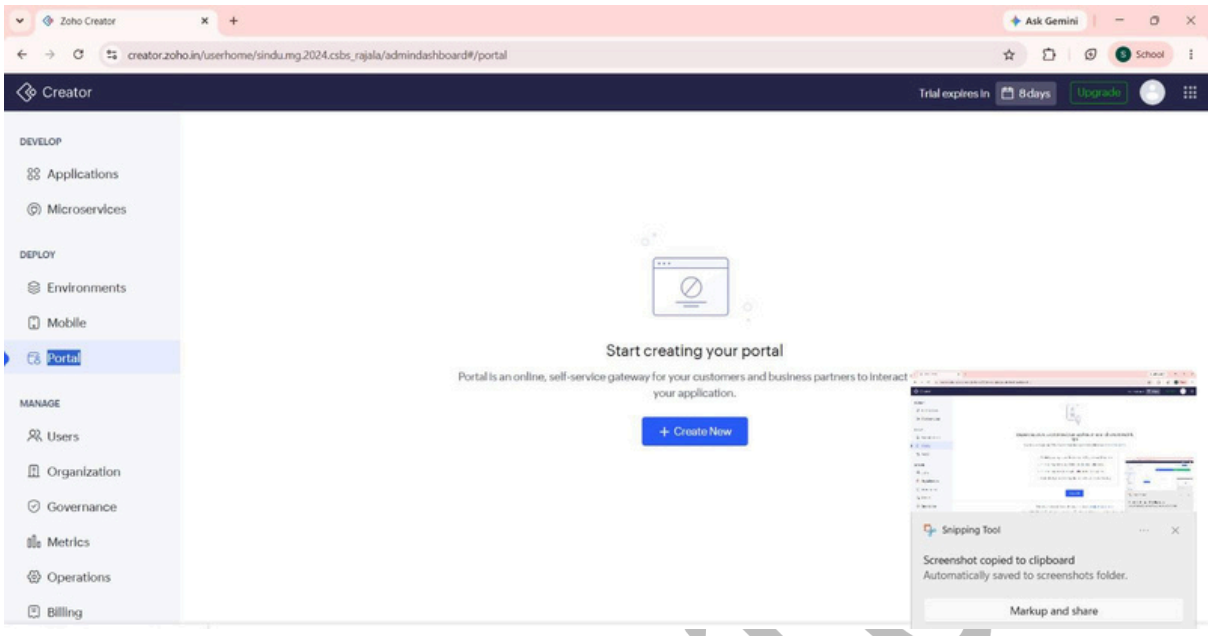

The Environments page is used to manage different deployment stages, such as **Stage** and **Production**. It allows users to test applications before publishing them to live users. Options like **Version History**, **Manage**, and **Publish** help control application releases. This ensures safe deployment and efficient version management.

Mobile Deployment Page

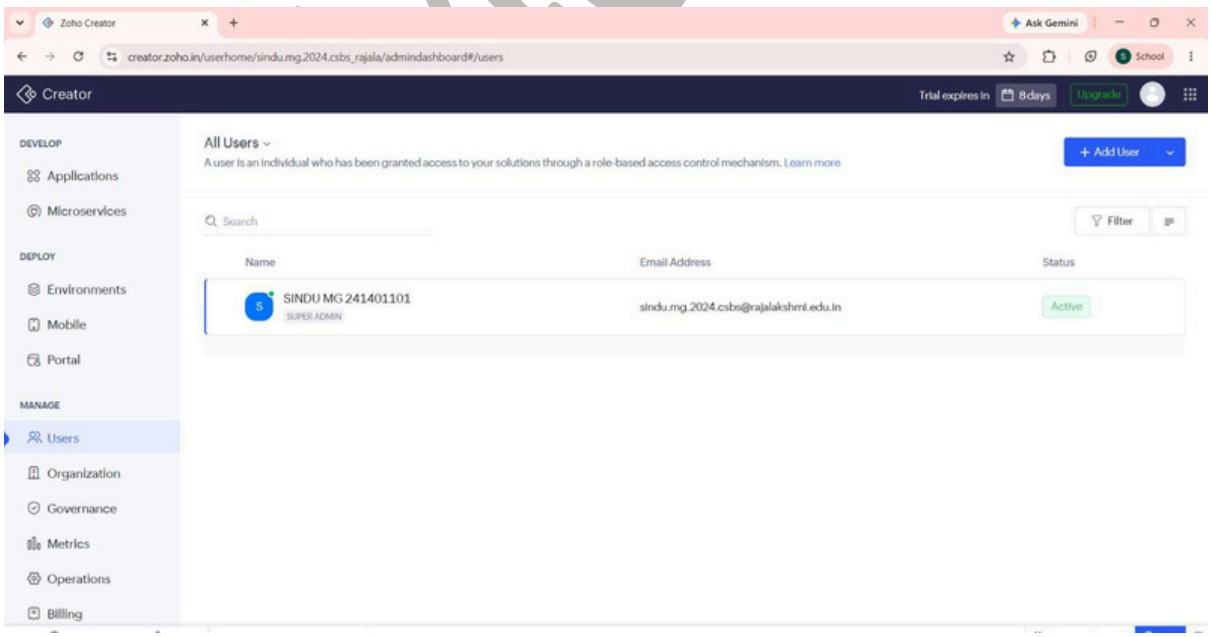

The Mobile page provides options for publishing Zoho Creator applications as mobile apps. The screen indicates that downloading a rebranded mobile app requires upgrading to a paid account. Users can still access the default Zoho Creator mobile app for free on Android and iOS. This feature supports mobile application distribution and branding.

Portal

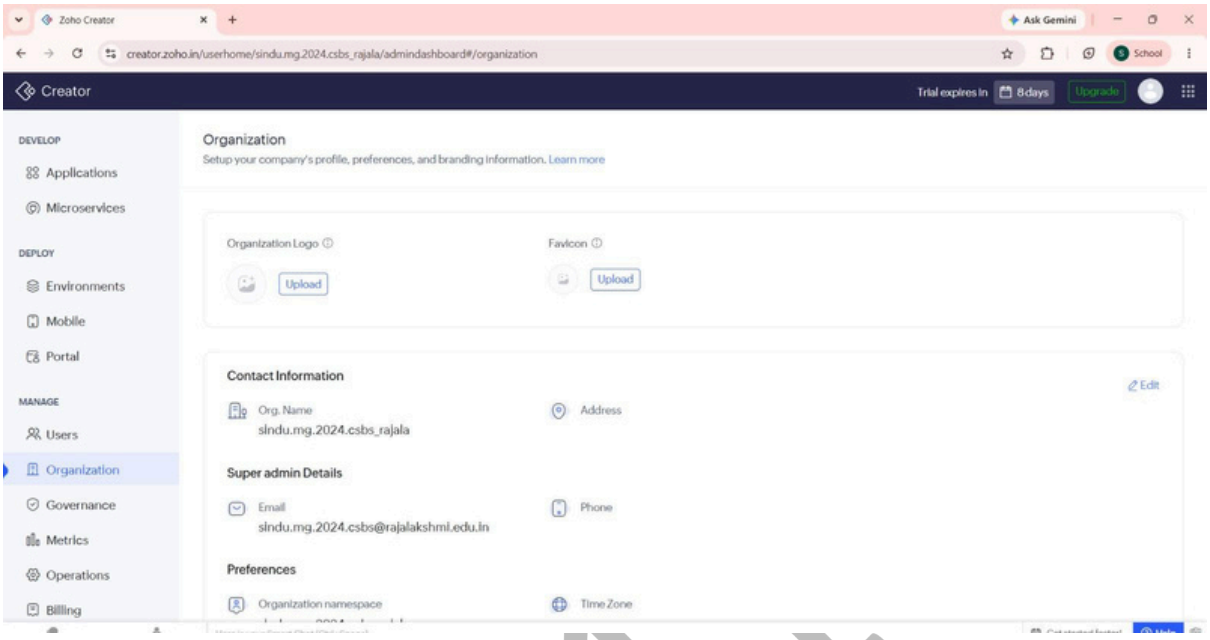

The **Portal** section in Zoho Creator allows organizations to create a secure self-service portal for customers, partners, or external users. It provides controlled accessto applications and data based on user roles and permissions. In this screen, no portal has been created yet, and the **Create New** option is available to set up a portal

Users

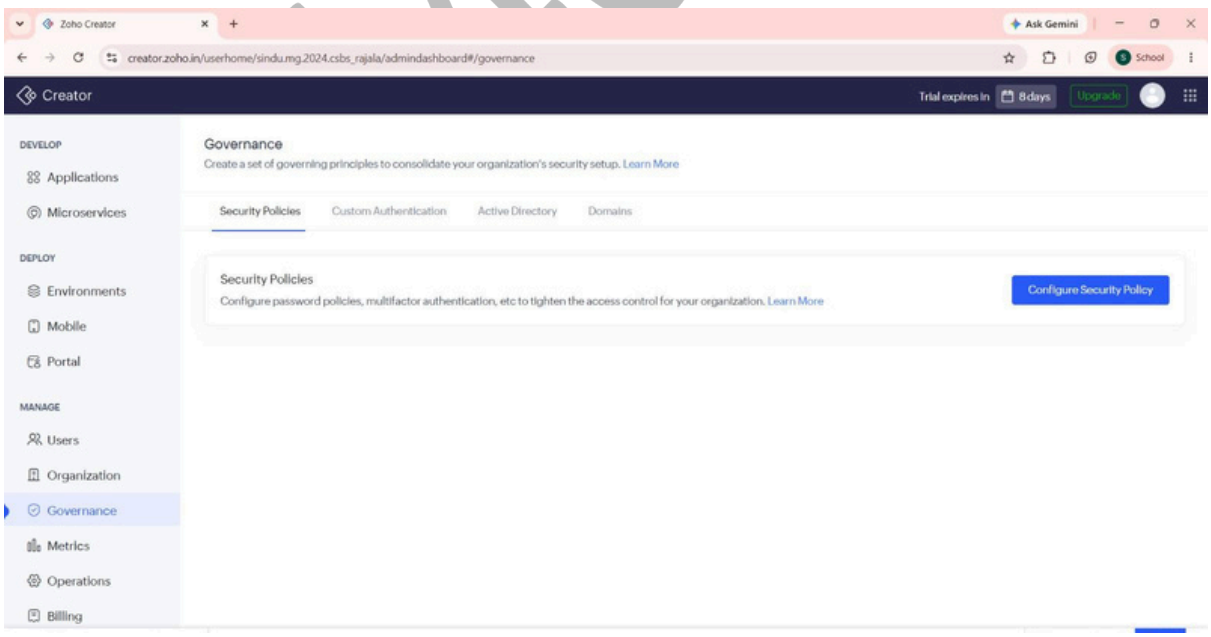

The **Users** page displays all users who have access to the Zoho Creator account. It shows user details such as name, email address, role, and account status. Administrators can add new users and manage user access through role-based permissions.

Organization

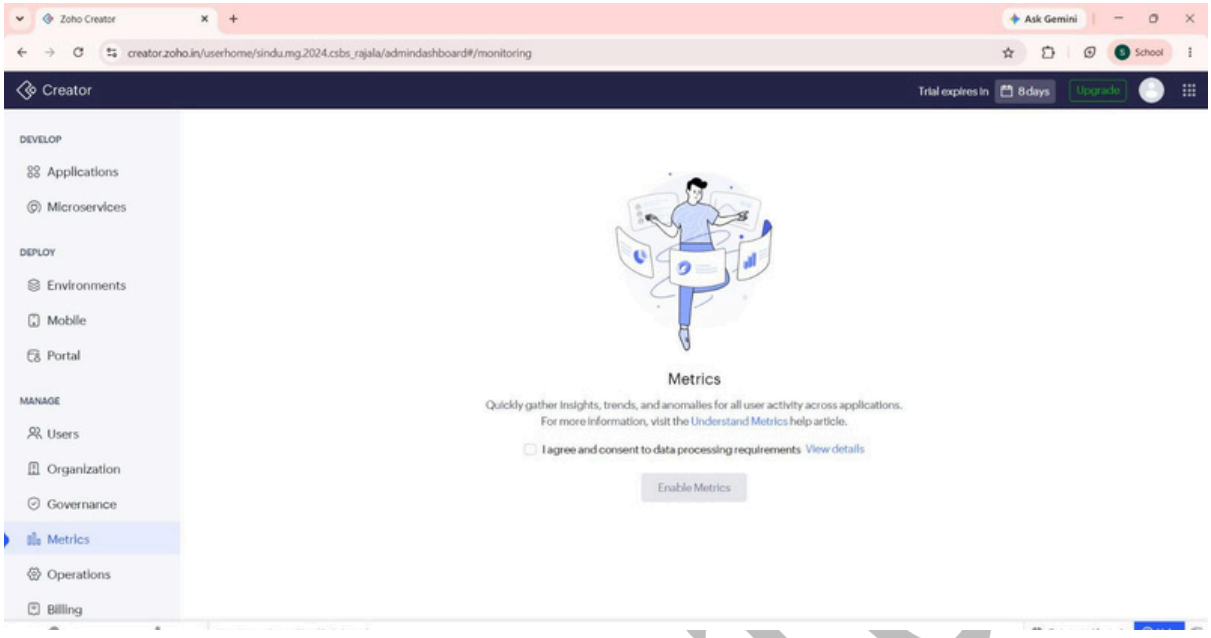

The **Organization** page contains the organization's profile and administrative information. Itincludes details such as the organization name, logo, contact information, super administrator details, and time zone. This page helps manage the overall settingsand branding of the organization.

Governance

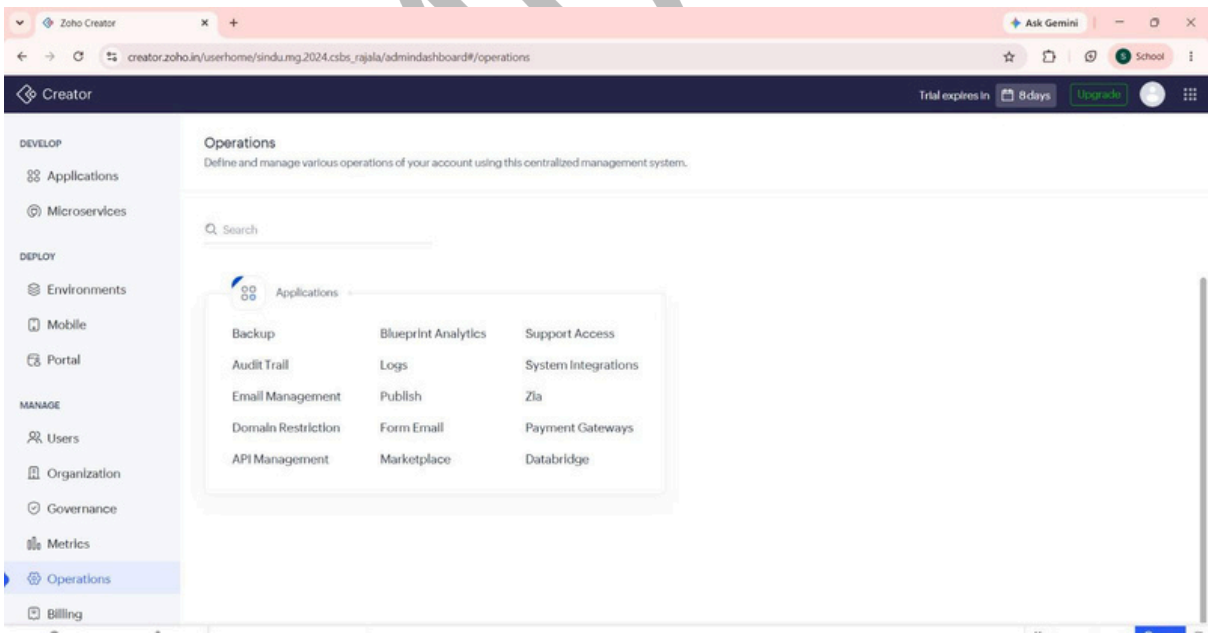

The **Governance** section is used to configure security and access control policies for the organization. It allows administrators to set password policies, authentication methods, Active Directory integration, and domain restrictions. These settings help improve the security and compliance of applications.

Metrics

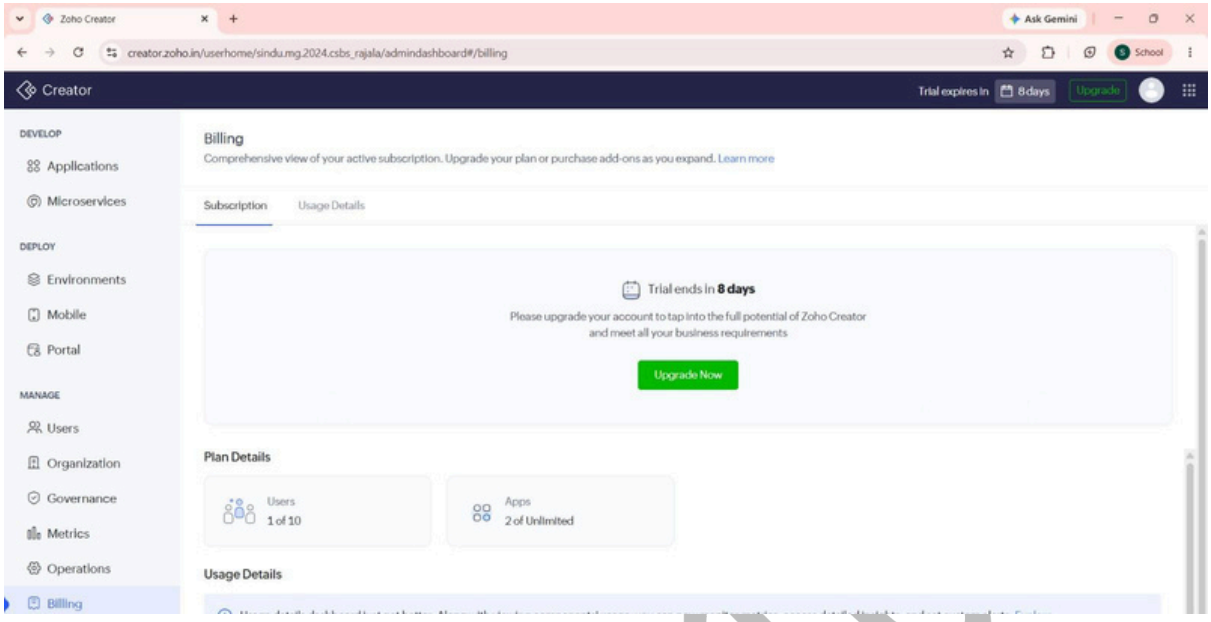

The **Metrics** page provides monitoring and analytics for applications developed in Zoho Creator. It helps administrators track application usage, user activity, and system performance. Metrics can be enabled to gain insights and improve application efficiency.

Operations

The **Operations** section provides centralized management tools for maintaining Zoho Creator applications. It includes features such as backup, audit logs, API management, email management, payment gateways, and system integrations. These tools help manage application operations efficiently.

Billing

The **Billing** page displays the current subscription plan, trial period, application usage, and user limits. It allows administrators to monitor resource usage and upgrade their subscription when required. This section helps manage licensing and account billing information.
